## Introduction

---

The Model 4901P Beta/Gamma Hand & Shoe Monitor is intended for use as a medium-level beta and gamma contamination monitor. There are four count channels in the standard configuration, monitoring the palms of each hand and the soles of each shoe.

The Model 4901P employs a total of 22 pancake Geiger-Mueller (GM)-type detectors, five in each hand detector (palm side only) and six in each foot detector. LED indicators show status and alarm location. The Model 4901P allows parameter updating by viewing the built-in, 16-character LCD display. Detector counts, background, alarm set points, and all parameters may be viewed on the LCD display.

Switches at each hand detector initiate an interrogation (both switches must activate). Audible alarm and status change indications are standard.

Features of the Model 4901P include: automatic background accumulate with subtract, password protection of parameters, pushbutton adjustment of the alarm audio volume, and simple LED status indicators. All parameters are stored in non-volatile memory, requiring no backup battery.

Model 4901P Hand & Shoe Monitor

---

*Model 4901P Hand and Shoe Monitor*

**Section**

**2**

**Specifications**

---

**Detectors:** pancake-type, halogen-quenched GM

**Window:**  $1.7 \pm 0.3$  mg/cm<sup>2</sup> mica

**Energy Response:** energy dependent

**Background Count Rate:**

**Hands:** 200-250 cpm

**Shoes:** 250-300 cpm

**Detector Efficiency (4π):**

**Hands:** 12% for <sup>99</sup>Tc

12% for <sup>137</sup>Cs

3% for <sup>14</sup>C

<sup>137</sup>Cs, 100 cm<sup>2</sup> yields 7%

**Shoes:** 10% for <sup>99</sup>Tc

10% for <sup>137</sup>Cs

3% for <sup>14</sup>C

(**Note:** This one-inch diameter source was placed across feet bars where shielding was minimal.)

<sup>137</sup>Cs, 100 cm<sup>2</sup> yields 4%

➤ **Note:** Data taken with 25 to 47 mm disc sources placed directly over pancake tube, except where noted.

**Sensitivity:** 85 mV nominal

**Counting Capacity:** 9999 cpm

**Count Time:** adjustable from 1 to 99 seconds

**Alarm Hold Time:** adjustable from 1 to 99 seconds

**Background Accumulation Time:** adjustable from 1 to 99 seconds

## Model 4901P Hand & Shoe Monitor

---

**Background Update Interval:** adjustable from 1 to 99 minutes. A background count will take place if the machine is not in use at every interval specified by this timer.

**Force Update:** Background accumulation will be forced within this interval of time if an automatic accumulation has not been made.

**Audio:** Built-in, unimorph-type speaker (greater than 68 dB at 0.6 m {2 ft})

**Power:** 95-135 Vac, 50/60 Hz, 50 watts maximum

**Fuse:** 2 each F-1A, 1 amp, 5 x 20 mm, 250 V

**Temperature Range:** 0 to 50 °C (32 to 122 °F) (LCD limits temperature range)

**Size:** 101.6 x 74.9 x 38.1 cm (40 x 29.5 x 15 in.) (H x W x D)

**Weight:** 20.4 kg (45 lb)

### **Compatible Firmware Versions:**

Firmware is a computer program located into permanent memory of the instrument. This hardware (memory) cannot be changed in its user environment.

This manual works with instrument firmware versions:

**Model 4901P: 420-03-N01.**

The firmware number displays when the instrument is first turned on, or may be viewed through the diagnostic menu.

**Section**

**3**

**User Operation**

---

**Assembly and Disassembly**

The vertical sections of the hand detector are now shipped detached from the foot detector section. Four screws (8-32X1/2 inch) are used to reattach the vertical sections. A connector is used to distribute power/signals to and from the detectors and main electronics.

**Note**

The floor pan is wired such that either upright sections may be attached to either side. The floor pan, therefore, is non-polarized, and the main electronics will recognize the right and left floor detectors correctly.

**Assembly Procedure**

- 1) Carefully unpack the two upright sections and the floor pan section.
- 2) Loosen the four screws located on the end of the foot detector section. Leave the upper two screws in place with about 0.64 cm (0.25 in.) of thread showing. Remove the lower two screws.
- 3) Lay one of the uprights (detector face down) on the floor or workbench near the opening on either end of the foot section.
- 4) Look inside the opening for the header that will accept the red plug at the lower end of the upright. Carefully attach the plug to this header.

**Note:**

The wires should exit the header/plug pointing downward. Make sure the plug is positioned properly (there should be no pins showing on either side of the plug).

## Model 4901P Hand & Shoe Monitor

---

- 5) Carefully raise the upright and hang the assembly on the two screws that were left in Step 2 above. The upper holes in the ears of the upright are slotted.
- 6) Start the two lower screws and tighten all four of these securely.
- 7) Repeat Steps 2 through 6 above for the remaining upright section.
- 8) Attach the power cord and turn the unit ON.
- 9) Check that the unit returns to normal service (**READY** LED will light) after the 60-second update interval has expired.

### Disassembly Procedure

- 1) Turn the power OFF to the Model 4901P and remove the power cord from the receptacle.
- 2) Place the unit on a workbench or other suitable work area.
- 3) Loosen the four screws holding one of the upright sections.
- 4) Leave the upper two screws in place and completely remove the lower screws.
- 5) Carefully lift the upright off and away from the foot section while disconnecting the harness from the floor header.
- 6) Reinstall the lower two screws and tighten them to prevent loss.
- 7) Pack the upright sections and the foot detector section well enough to prevent contact with each other and to provide good cushioning.

#### Note:

At least 5 centimeters (two inches) of packing should be provided.

### Operational Check

To ensure that these instruments are functioning correctly, an operational check should be performed routinely or before using the instrument. This operational check should also be done after any maintenance ( ie. detector replacement) is done on the instrument.

## Model 4901P Hand & Shoe Monitor

---

This check verifies that the instrument is turned on, that the settings are appropriate, and that the system alarms when the detectors are exposed to excess radiation (above background level). Ludlum Measurements suggests that this operational check be performed after setup and before use.

As long as the system passes the operational check, no calibration or other checks are necessary. If the response or any function of the portal monitor changes, the instrument should be checked and brought into compliance with the manufacturer's original specifications.

Check each of the detectors for sensitivity to beta/gamma radiation. Verify that you get a RADIATION ALARM, using a check source ( $^{137}\text{Cs}$ , 1  $\mu\text{Ci}$ ).

Repeat alarm checks for all four sections to confirm that all detectors are functioning.

### Radiation Check

A count starts when both of the hand switches are held down. If the LCD was in a SETUP menu, then the LCD returns to the READY menu and a normal count will take place. If the LCD was in READ COUNTS menu the LCD will remain in this menu and the interrogation will proceed normally.

#### Note:

When monitoring counts via the CAL MODE, an interrogation will not be available (the READY LED will be extinguished).

Prior to operation, the monitor must be allowed to update the background count. This mandatory update occurs just after power-up and after expiration of the Force Update interval timer. New background count data is compared to the low and high-background set points that have been programmed into the unit. If the set points have been exceeded, an alarm is given (check individual LEDs for offending channel) and the unit returns to updating background.

In order to make a radiation check, follow the steps below:

- The green READY light must be lit in order to use the instrument.
- Step up and position both hands over the detectors.
- Place palms flat against the bottom screen and push inward until the green COUNTING lights turns on.
- The yellow SHORT COUNT light will turn on if the hands are

## Model 4901P Hand & Shoe Monitor

---

removed before the count is complete.

- Once count is complete, the green CHECK OK light or the read ALARM light will turn on. Smaller red lights will turn on with the ALARM light to indicate the location of the alarm.
- Remove hands and step off the instrument.

**Section**

**4**

## **Description of Controls and Functions**

---

**READOUT:** LCD, one line, 16-character alphanumeric display.

**EXIT KEY:** moves back one menu selection.

➤ **Speed Trick:** Press and hold the EXIT key to quickly return to the READY menu.

**INCREMENT (Up Arrow ↑) BUTTON:** moves up one line in the current menu. Within parameter setup, a digit increments by one. An on/off parameter toggles to the other state.

**MINUTES:** a three-decade thumbwheel switch used for presetting count time.

**DECREMENT (Down Arrow ↓) BUTTON:** moves down one line in the current menu. Within parameter setup, a digit decrements by one. An on/off parameter toggles to the other state.

**SELECT KEY:** selects the current menu choice.

➤ **Speed Trick:** If the SELECT key is held down while a count channel is being displayed, the alarm level for that channel displays. Releasing the SELECT key returns to the count for that channel.

**SAVE KEY:** Recessed pushbutton that saves all parameters to non-volatile memory. This button can only be operated by inserting a small screwdriver or pin through the hole. All of the microprocessor RAM is transferred to flash memory when this button is pushed. Any changes made to variables only change the current microprocessor RAM. If the Model 4901P is turned off prior to saving changes, these changes are lost. To save parameter changes, press the **SAVE** button before turning the Model 4901P off. Upon power-up, the flash memory is loaded into the microprocessor.

**LEDs:** (Refer to drawings at the back of this manual for LED layout.)

**READY LED:** must be lit prior to any interrogation.

➤ **Note:** It is possible to begin an interrogation from any setup prompt (when all LEDs are on). A count may be started by pressing either of the hand switches, causing the READY LED to activate, followed by the COUNTING LED.

## Model 4901P Hand & Shoe Monitor

---

**COUNTING LED:** indicates that a hand count is in progress. Deactivating either of the hand switches prior to expiration of the count time will cause this light to go off and the SHORT COUNT LED to come on. When the count is complete, the CHECK OK or ALARM LED activates. CHECK OK lights for two seconds or until the hand switches are released. The SHORT COUNT LED stays on for the alarm hold time or until a hand switch is reactivated. If no hand switch is sensed during the short count time, then the Model 4901P goes back to the ready state, lighting the READY LED.

**CHECK OK LED:** indicates that a count has been completed and no alarms were sensed. This LED will stay on until the hand switches are released, or for two seconds.

**ALARM:** indicates that a count has exceeded the alarm set point. The individual LH, RH, LF, or RF LED lights as soon as alarm is sensed and remain(s) lit for the alarm hold time. The Model 4901P will return to the ready state. The master ALARM LED and audible alarm will activate after the end of the count time and the user has removed both hands from the switches. This condition will exist for the duration of the ALARM HOLD TIME.

**SHORT COUNT LED:** indicates that a count was in progress and the user raised off either hand switch. The SHORT COUNT LED stays on for the alarm hold time or until the hand switches are re-activated. A short count resets the count time. If no hand switch is sensed during the short count time, then the Model 4901P goes back to the ready state lighting the READY LED.

**POWER/OK LED:** indicates that 5 Vdc is available on the central processor board.

**LH, RH, LF, RF LEDs:** indicates which channel in a count has alarmed. These light as soon as an alarm is sensed. When the count is complete, the COUNT OK will not light. The ALARM LED and audio stay on for the alarm hold time, then the Model 4901P goes back to the ready state, lighting the READY LED.

**POWER ON/OFF:** switch to turn instrument on and off.

**Section**

**5**

## **Safety Considerations and Warning Markings**

---

### **Environmental Conditions for Normal Use**

Indoors or outdoors (clement weather only)

No maximum altitude

Temperature range of -20 to 50 °C (-4 to 122 °F)

Maximum relative humidity of less than 95% (non-condensing)

Mains supply voltage range 85-265 Vac

Maximum transient voltage of 1500 Vac

Installation Category (Overvoltage Category) II (as defined by IEC 1010-1)

Pollution Degree 2 (as defined by IEC 644)

### **Cleaning Instructions and Precautions**

The Model 4901P may be cleaned externally with a damp cloth, using only water as the wetting agent. Do not immerse the instrument in any liquid. Observe the following precautions when cleaning:

1. Turn the instrument OFF and disconnect the instrument power cord.
2. Allow the instrument to sit for one minute before cleaning.

### **Warning Markings and Symbols**

**Caution!**

The operator or responsible body is cautioned that the protection provided by the equipment may be impaired if the equipment is used in a manner not specified by Ludlum Measurements, Inc.

# Model 4901P Hand & Shoe Monitor

---

## Caution!

Verify instrument voltage input rating before connecting to a power converter. If the wrong power converter is used, the instrument and/or power converter could be damaged.

The Model 4901P is marked with the following symbols:

**PROTECTIVE CONDUCTOR TERMINAL** (per IEC 417, No. 5019) – designates the central grounding point for the safety ground. This symbol is visible inside the chassis.

**ALTERNATING CURRENT (AC)** (IEC 417, No. 5032) - designates an input receptacle that accommodates a power cord intended for connection to AC voltages. This symbol appears on the AC panel.

**CAUTION** (per ISO 3864, No. B.3.1) – designates hazardous live voltage and risk of electric shock. During normal use, internal components are hazardous live. This instrument must be isolated or disconnected from the hazardous live voltage before accessing the internal components. This symbol appears on the AC panel. **Note the following precautions:**

## Warning!

The operator is strongly cautioned to take the following precautions to avoid contact with internal hazardous live parts that are accessible using a tool:

1. Turn the instrument power OFF and disconnect the power cord.
2. Allow the instrument to sit for one minute before accessing internal components.

The “**crossed-out wheellie bin**” symbol notifies the consumer that the product is not to be mixed with unsorted municipal waste when discarding; each material must be separated. See section 8, “Recycling” for further information.

### Electrical Safety Precautions

- Do not expose the unit to rain or an environment where it may be splashed by water or other liquids, as doing so may result in fire or electric shock.
- Use the unit only with the voltage supply specified on the unit. Using a voltage supply higher than that which is specified may result in fire or electric shock.
- Do not cut, kink, or otherwise damage nor modify the power supply cord. In addition, avoid using the power cord in close proximity to heaters, and never place heavy objects – including the unit itself – on the power cord, as doing so may result in fire or electric shock.
- Avoid installing or mounting the unit or its power supply in unstable locations, such as on a rickety table or a slanted surface. Doing so may result in the unit falling down and causing personal injury and/or property damage.

### Replacement of Fuses

#### **Warning!**

For continued protection against risk of fire, replace only with fuses of the specified type and current rating!

---

**Section**

**6**

**Setup**

---

This section gives instructions on how to use the keys to set up the instrument. Examples of keystroke sequences are given for each parameter. For information on using the instrument to make a radiation check, see Section 7.

**Setup Menu**

The setup menu has six choices:

1. Set up ALARMS MENU
2. Set up BACKGROUND MENU
3. Set up CAL MENU
4. Set up PASSWORD MENU
5. Set up TIME MENU
6. Set up VOLUME MENU

To change a parameter, access the variable of interest through the setup menus using the **SELECT** and **increment/decrement** “**↑/↓**” keys. Press the **SELECT** key to change the parameter. The cursor becomes visible and blinks on the variable to change. On multiple digit variables, press the **SELECT** key to access the next digit.

- **Speed Trick:** After changing a parameter, press and hold **SELECT** until a beep is heard. This will quickly exit the setup parameter mode. The setup mode has a blinking cursor.

**Set up Alarm Menu**

The **SETUP ALARM** menu allows changes to be made to the individual count alarms. All alarm and background values are in units of CPM (counts per minute).

# Model 4901P Hand & Shoe Monitor

---

## Individual Alarms

The individual channel alarms are left hand, right hand, left foot, and right foot (LH, RH, LF, and RF).

If the counts are greater than, or equal to, the count alarm set point for an individual channel during the count time, then the individual alarm LED (**LH, RH, LF, RF**) activates. When the count time expires and an alarm is present, the alarm audio sounds and the main **ALARM** LED activates. The alarm will sound for the preset ALARM HOLD TIME.

To access the SETUP ALARM menu:

- Turn the instrument ON. Wait for READY to display on the LCD.
- Press SELECT once to select the setup menu. SETUP menu appears.
- Press SELECT once to execute the setup menu. ALARMS menu appears.
- Press SELECT once to execute the alarms menu. LH ALARM XXXX appears. The XXXX is a number between 0 and 9999. This is the current left-hand alarm setting.
- To change the current setting, press **SELECT** to activate the first digit. Use **increment/decrement** “**↑/↓**” to change first digit as desired. Press **SELECT** to activate the second digit. Use **increment/decrement** “**↑/↓**” to change second digit as needed. Press **SELECT** to temporarily save the setting.
- From the LH ALARM XXXX selection, the increment/decrement keys may be pressed to access further parameters.
- Press the EXIT key to exit back to the ALARMS menu.

### Note:

This parameter must be greater than or equal to the BKGROUND TIME parameter below and less than or equal to the FORCE UPDATE parameter above.

## Low Background Alarms

Set the parameter for LO BKGND-RH to a value that would allow detection of a bad detector. For backgrounds near 100 counts in one minute, this might be 50. Set the LO BKGND-LH, LF, and RF parameter to similar values.

## High Background Alarms

Set the high background parameters to preclude nuisance alarms from varying backgrounds. For backgrounds near 100 counts per minute, choose 175. Set both the LH/RH and LF/RF high-background set points.

## Setup Background Menu

Access the SETUP menu:

- With READY displayed on LCD.
- Press SELECT once to select the setup menu. STEUP menu appears.
- Press SELECT once again to execute the setup menu. ALARMS menu appears.
- Press decrement ↓ once to advance to the BACKGROUND MENU.
- Press SELECT once to activate menu.
- Press SELECT and use either increment or decrement ↑↓ key to toggle the background subtract feature on or off as desired. This will normally be left in the ON position. Activate and exit the on/off prompt by pressing the SELECT key one last time.
- Press the decrement ↓ key to move to the FORCE UPDATE interval timer. Press the SELECT key to edit this timer as desired. This interval is the maximum time allowed between updates and would normally be set to 15 or 30 minutes. This parameter should be set prior to setting the Update Interval Time or Background Count Time and must always be larger than or equal to either of those (see below). Save and exit this menu item by pressing the SELECT key one last time.
- Press the decrement ↓ key to select the BKGROUND TIME. This is the actual background count time and may be set from 1 to 99 seconds. Longer count times will tend to smooth the background subtract data. Typical count times might be 60 seconds.

### Note:

This number must be less than or equal to the FORCE UPDATE and BKGND UPD INT parameters as described above.

### Setup Time Menu

This menu sets the count time and alarm hold time. The alarm hold time also applies to the SHORT COUNT LED.

To access the SETUP TIME menu:

- With READY displayed on the LCD.
- Press SELECT once to select the setup menu. SETUP menu appears.
- Press SELECT once again to execute the setup menu. ALARMS menu appears.
- Press the **increment “↑”** key twice. TIME MENU appears.
- Press SELECT once to execute the setup time menu. COUNT TIME XX appears. The XX is a number between 0 and 99 (seconds).
- Press **SELECT** to activate the first digit. Use **increment/decrement “↑/↓”** to change the first digit. Press **SELECT** to activate the second digit. Use **increment/decrement “↑/↓”** to change the second digit. Press **SELECT** to temporarily save the parameter.
- Use **increment/decrement “↑/↓”** to change to the next setting.
- Press the EXIT key to exit back to the TIME menu.

### Count Time

The count time is adjustable between 1 and 99 seconds. This time applies to a count activated by the hand switches. Both of the hand switches must be held down for the duration of the count. If they are not, the SHORT COUNT LED activates.

### Alarm Hold Time

The alarm hold time is adjustable from 1 to 99 seconds. This time applies to a hand count that has alarmed. If the ALARM LED lights, then this light and alarm audio will be held for the alarm hold time. The SHORT COUNT LED will also light for this hold time.

**Note:**

Remember to press the SAVE key in order to store parameters in non-volatile memory prior to power-down.

## Setup Volume Menu

The volume menu sets only the ALARM volume. The Model 4901P emits a beeping sound after various events (mode change, parameter change, etc.). This beeping volume is always at the maximum and is not adjustable.

To access the SETUP VOLUME menu:

- READY is displayed on the LCD.
- Press SELECT once to select the setup menu. SETUP menu appears.
- Press SELECT once again to execute the setup menu. ALARMS menu appears.
- Press the increment key once. VOLUME MENU appears.
- Press SELECT once to execute the setup volume menu. ALARM VOLUME XXX appears. The XXX is a number between 0 and 255. This variable sets from 255 (lowest level) to 000 (maximum level). Any audio alarm uses this volume set point. The beep audio is not affected by this setting.
- Press SELECT to activate the first digit. Use increment/decrement “↑/↓” to change the first digit. Press SELECT to activate the second digit. Use increment/decrement “↑/↓” to change the second digit. Repeat for third digit. Press SELECT to save.
- Press the EXIT key to exit back to the VOLUME menu.

**Note:**

Remember to press the SAVE key in order to store any changed parameters in non-volatile memory prior to power-down.

## Read Menu

The read menu has three choices:

1. Read Alarms Menu
2. Read Time Menu
3. Read Volume Menu

The read menu accesses the same menu structure as the Setup Menu. **However, no variables may be changed from the read menu.**

## Read Alarms Menu

To access the READ ALARMS menu:

- Turn the instrument ON. Wait for **READY** to display on LCD.
- Press **SELECT** once to select the setup menu. SETUP menu appears.
- Press increment key “**↑**” once. READ menu appears.
- Press **SELECT** once to execute the read menu. ALARM menu appears.
- Press **SELECT** once to execute the alarms menu. GLOBAL ALARM XX appears. The XX is a number between 0 and 99.
- Use the increment/decrement “**↑/↓**” keys to change to the next alarm channel.
- Press the **EXIT** key to exit back to the ALARMS menu.

## Read Time Menu

This menu reads all the time parameters of the Model 4901P. The user cannot change these values from this menu.

To access the READ TIME menu:

- Turn instrument ON. Wait for **READY** to display on LCD.
- Press **SELECT** once to select the setup menu. SETUP menu appears.

- Press decrement key “↓” once. READ menu appears.
- Press SELECT once to execute the read menu. ALARMS menu appears.
- Press decrement “↓” key twice. VOLUME menu appears.
- Press SELECT once to execute the time menu. ALARM VOLUME XXX appears. The XXX is a number between 0 and 255.
- Use the increment/decrement “↑/↓” keys to change to other parameters.
- Press the EXIT key to exit back to the VOLUME menu.

### **Read Volume Menu**

This menu reads all of the volume parameters of the Model 4901P. The user cannot change these values from this menu.

To access the READ VOLUME menu:

- Turn the instrument ON. Wait for READY to display on LCD.
- Press SELECT once to select the setup menu appears.
- Press decrement key ↓ once. READ menu appears.
- Press SELECT once to execute the read menu. ALARMS menu appears.
- Press decrement ↓ key twice. VOLUME menu appears.
- Press SELECT once to execute the time menu. ALARM VOLUME XXX appears. The XXX is a number between 0 and 255.
- Use the increment/decrement ↓/↑ keys to change to other parameters.
- Press the EXIT key to exit back to the VOLUME menu.

### **Password Menu**

This menu sets the password and whether the password is ON or OFF.

## Model 4901P Hand & Shoe Monitor

---

To access the PASSWORD menu:

- With READY displayed on the LCD.
- Press SELECT once to select the setup menu. SETUP menu appears.
- Press SELECT once to execute the setup menu. ALARMS menu appears.
- Press the increment or decrement “↑/↓” keys until the PASSWORD menu appears.
- Press SELECT once to execute the PASSWORD ON/OFF menu. PASSWORD: XXX appears. The XXX is either ON or OFF>
- Press SELECT to change the password status. Use increment/decrement “↑/↓” to change to either ON or OFF. Press SELECT to temporarily save parameter.
- Use increment/decrement “↑/↓” to change the next setting. ENTER PASS: XXXX appears.
- To reset the PASSWORD to 0000, hold down the SAVE key while turning on the instrument.
- Press SELECT to activate the first digit. Use increment/decrement “↑/↓” to change the first digit. Press SELECT to activate the second digit. Use increment/decrement “↑/↓” to change the second digit. Repeat for third and fourth digits.
- Press the EXIT key to exit back to the TIME menu.

### Note:

Press the SAVE key in order to store parameters in non-volatile memory prior to power-down.

### **Calibration Menu**

The Cal Menu has two choices:

#### **Display of Hands Count Data**

Selecting this mode provides a one-second updating display of the current count from the hand detectors (in counts per second). This mode is used for setting or checking the threshold level and as a general diagnostic using a pulser or source counts from the detectors.

#### **Display of Feet Count Data**

Selecting this mode provides fast, one-second updating display of the current count from the feet detectors (in counts per second). This mode is used for setting or checking the threshold level and as a general diagnostic using a pulser or source counts from the detectors.

**Section**

**7**

## **Calibration and Troubleshooting**

---

### **Calibration Procedure**

#### **General**

The Model 4901P was set up for 80 mV sensitivity and 900 Vdc operation for GM type detectors.

#### **Equipment**

1. Ludlum Model 500 pulser or equal
2. High-impedance voltmeter or high-voltage measurements (10 megohm)
3. 8-15 V DC power supply with modular connection (Pin 2 is positive and Pin 3 is ground.), polarity protected.

#### **Annual Calibration Verification Procedure**

Calibration of the Model 4901P is accomplished by checking the threshold level at each preamplifier board (LMI #5436-040) located on each detector.

The design threshold level is 80 mV and operating high voltage is approximately 900 Vdc.

- Using a clip lead cable, connect the Model 500 pulser to the detector ballast board and apply power to the board.
- Sweep the pulser amplitude for a negative leading edge 70 to 90 mV pulse and confirm counter turn on at 80 mV  $\pm 5$  mV. If necessary, adjust R1 (THS) until pulses just appear.
- Check for 900 Vdc  $\pm 10$  V at the detector ballast board. If necessary, adjust R4 (HV ADJ) for 900 Vdc at the ballast board input.

### Trouble Shooting

The block diagram of the Model 4901P can be thought of as four detectors connected to a multi-counter main board. All detectors operate from a single, high-voltage power supply (HVPS). This supply is located on the main electronics chassis just below the main board. The count data appears at this main board as 5-volt digital pulses. These pulses are generated on the preamplifier board at each of the four detectors. Calibration is performed on each detector and consists of setting the lower level threshold or discriminator (LLD) and setting the HV bias to the proper operating point.

The user LED board presents status information to the user via a serial data stream from the main controller board. This serial data is placed into two drivers that directly drive the LEDs.

The main control board also sends data to the LCD display. The LCD is intended for setup purposes as well as diagnostics. It is not necessary for the user to view the LCD screen under normal conditions. Count data can be reviewed in the display if desired.

The “pancake” GM detectors used in this model are simple in application but can cause headaches when “ganged” in parallel as in the Model 4901P. One bad detector can cause the entire unit to become noisy, due mainly to the use of the single HVPS.

Normally, only one detector becomes noisy and the culprit can be found in that particular array. A quick visual check may reveal the bad detector. Inspect the thin membrane cover of each of the pancakes to see if one of them has lost its gas. The membrane will look loose or wrinkled and when touched (carefully) will make a crackling sound. This one will definitely need replacement.

If you find no broken membranes and you are in a relatively quiet area, you can listen to each tube for the one that is noisy. Each event in the tube is an avalanche of charge (a spark) so they can be heard rather easily, provided you have adequate HV bias. A single bad probe can pull the HV bias down and prevent all others from working.

As a last resort, the detector array in question will have to be removed and each detector signal wire unplugged until the offending pancake has been located. The signal wires have a connector on one end to facilitate fast, no-solder removal.

There are no batteries required for parameter storage during power-down. All parameters are saved in flash memory when the Store button is pressed. Press Store anytime you change parameters and choose to use them from then on. If you do not press Store, the old values will reappear after the next

## Model 4901P Hand & Shoe Monitor

---

power-down and up cycle.

### **Caution!**

To avoid electrical shock, ensure that the instrument is off for at least one minute before touching the connections.

## **Repair and Calibration**

To return an instrument for repair or calibration, provide sufficient packing material to prevent damage during shipment.

Every returned instrument must be accompanied by an Instrument Return Form, which can be downloaded from the Ludlum website at [www.ludlums.com](http://www.ludlums.com). Find the form by clicking the “Support” tab and selecting “Repair and Calibration” from the drop-down menu. Then choose the appropriate Repair and Calibration division where you will find a link to the form.

## Recycling

---

Ludlum Measurements, Inc. supports the recycling of the electronics products it produces for the purpose of protecting the environment and to comply with all regional, national, and international agencies that promote economically and environmentally sustainable recycling systems. To this end, Ludlum Measurements, Inc. strives to supply the consumer of its goods with information regarding reuse and recycling of the many different types of materials used in its products. With many different agencies – public and private – involved in this pursuit, it becomes evident that a myriad of methods can be used in the process of recycling. Therefore, Ludlum Measurements, Inc. does not suggest one particular method over another, but simply desires to inform its consumers of the range of recyclable materials present in its products, so that the user will have flexibility in following all local and federal laws.

The following types of recyclable materials are present in Ludlum Measurements, Inc. electronics products, and should be recycled separately. The list is not all-inclusive. Nor does it suggest that all materials are present in each piece of equipment:

- Batteries
- Glass
- Aluminum and Stainless Steel
- Circuit Boards
- Plastics
- Liquid Crystal Display (LCD)

Ludlum Measurements, Inc. products, which have been placed on the market after August 13, 2005, have been labeled with a symbol recognized internationally as the “crossed-out wheelie bin.” This notifies the consumer that the product is not to be mixed with unsorted municipal waste when discarding; each material must be separated. The symbol will be placed near the AC receptacle, except for portable equipment where it will be placed on the battery lid.
